

# RESPOND RELIABLY.

## MAXIMUM SAFETY AND EFFICIENCY.

### DRIVER TRAINING

### CONSULTING

## Our Vision

**Rooted in ARFF vehicle development and testing, we share expertise that makes a difference.**

Through the ARFF Driving Academy, we share our in-depth expertise built on years of hands-on experience as leading engineers and test drivers.

We take a training approach that goes beyond standard routines and internal capabilities – **targeting the real challenges of ARFF driving, where weight, speed and risk intersect and incidents actually occur.**

By passing on our specialized driving techniques and knowledge, we improve safety and operational efficiency exactly where it matters most – delivering exceptional added value beyond conventional driver training routines.

Our vision includes advancing ARFF response through data-driven and standardized approaches – creating real value for operational decision-making and long-term safety improvements.

R(C) = 134 ft.  
V(in) = 32 mph\*

Time = 02:07 [mm:ss]\*

R(C) = 262 ft.  
V(in) = 45 mph\*

# ARFF Driving Academy

# Our Services

As the specialized provider of ARFF response expertise, we deliver on-site driver training tailored to your specific conditions – and back it up with targeted consultancy.

We align our training with your tactics, vehicle types, and team structure. From new recruits to experienced operators, our **411 Safe Efficiency** program covers initial training, recurrent and proficiency checks – all based on defined objectives and data.

Training is fully integrated into your daily routines for maximum effectiveness. If an ARFFV simulator is part of your training strategy, we enhance your training with a hybrid format.

We also support you with organizational and technical consulting, vehicle checks, performance testing, and consultancy services like response route analysis or assistance with vehicle procurement decisions.

**„As head of the Swiss Air Force's airport fire departments, I also rely on the specialized training provided by the ARFF Driving Academy for our crash tender operators. Particularly in view of the risk and the increasing number of recruits without any previous driving experience, I see this as an essential element for the future-oriented positioning of an airport fire department.”**

Lt. Col. Hans Schmid  
Head of Crash and Fire Rescue and Fire Training Center Swiss Air Force (ret.)
